Sub:- Continuation electricity faults and black out in Rail Vihar, Sonipat.

In view of several representations from RWA, IRWO had deputed GM/Elect. (Shri Goyal ji) for rectification of electricity faults. In this regards, some equipments were replaced and repaired by March, 2019 and the electricity supply become normal up to June, 2019.

However, during current rainy season since July, 2019, electricity faults occurred due to some internal panel faults / deficiencies. Supply of Electricity from POWER HOUSE reached to our end through Transformer installed by the supply authority. Transformer is equipped with jumper wire, fuse wire. The faults like Melt down of Jumper Wire, Fuse Wire or burst occurs in the area of Transformer. It is not know as to whom should be held responsible for this?, Electricity Department or IRWO. Besides this, sometimes Generators are running when electricity available and also some time Genset not started automatically. It costs Fuel and environment.

With deep pain, it is again informed that break down in electricity supply has now been worst of season (17th & 18th August, 2019) so much that it goes to 46 hours continuation which is unbearable. Invertors and other arrangement failed. Children have to study in मोमबत्ती and दिया. Residents have been forced to leave a life of 18th / 19th century.

It is therefore, again requested to direct concerned officials immediately for permanent solution of above electricity faults. Besides this, what deficiencies in repair / replacement has been left out by the team during their work done 6 months back may also be investigated.

Thanking you in anticipation.

Yours sincerely
